Persons "actually working" include those temporarily laid off because of weather.

Some duplication may occur as a result of frequent movement between jobs or because some persons (such as electricians) may work on several jobs which are under construction simultaneously.

Industrial Accidents

Statistics in the next four tables have been compiled from reports of claims closed in accordance with provisions of the South Australian Workmen's Compensation Act. Notable exclusions are self-employed persons and all Commonwealth Government employees.

An industrial accident has been defined as a compensated work injury causing death or absence of the injured person from work *for one week or more*, excluding journey cases, cases occurring during a recess period, and disease cases. One week has been interpreted as one week of seven calendar days or five working days.

Note: (1) In the cases of multiple births included above the following still births were recorded: twins, nuptial—1953, 8; 1954, 2; 1955, 5; 1957, 5; 1958, 4; 1959, 10; 1960, 2; 1961, 6; 1962, 7; twins, ex-nuptial—1954, 1; 1961, 1.

(2) For registration purposes, where only one child of a multiple pregnancy is live-born, that child is recorded as a single birth, so it is possible that not all cases of such multiple confinements have been detected. However, the number of multiple births is not significantly affected.

Note—In 1959 the Commonwealth Parliament passed the *Matrimonial Causes Act* 1959, which came into operation on 1st February 1961. This Act established uniform grounds throughout the whole of the Commonwealth for the termination of marriage and superseded the matrimonial cause laws for the States and Territories except in so far as the transitional provisions of the Act keep them in force for the purpose of completing pending proceedings. The main changes in South Australia are as follows :—

(i) The period of desertion constituting a ground for dissolution of marriage is reduced from three years to two years.

(ii) A petition on the ground of separation for five years does not now require a Court order for judicial separation as a pre-requisite.

(iii) The period of the decree nisi for dissolution or annulment of marriage is reduced from six months to three months.

Note: *See* note to Table 39 re change in legislation.

(*a*) At time of petition. Under State legislation information obtained on "children" covered only living "issue" under 16 years; the Commonwealth Act provides for living "children of the marriage" under 21 years to be shown. As the numbers of orders absolute for dissolution in 1961 and 1962 combine those granted under both the old and the new legislation, the information on children for each of these years is not strictly comparable with that for each previous year.

General Insurance

DEFINITIONS.—The statistics herein conform substantially to the definitions stated below and should be interpreted in accordance therewith :—

(i) Premiums represent the full amount receivable in respect of policies issued and renewed in the year less returns, rebates, and bonuses, paid or credited to policy holders in the year. They are not adjusted to provide for premiums unearned at the end of the year, consequently the amounts shown differ from "earned premium income" appropriate to the year. When figures are increasing, as in recent years, premiums receivable (as shown in the statistics) are greater than "earned premium income" appropriate to the year. The converse applies when figures are declining.

(ii) Claims include provision for outstanding claims and represent claims or losses incurred in the year.

(iii) Contributions to fire brigades, commission and agents' charges, and expenses of management, mainly represent charges paid in the year.

(iv) Taxation mainly represents payments made in the year; hence amounts included for income tax are based on income of earlier years.

The tables contain selected items of statistics and are not construable as "profit and loss" statements or "revenue accounts".

Instalment Credit for Retail Sales

The statistics in this table cover the operations of all types of instalment credit schemes which relate primarily to the financing of retail sales of goods.

In general, the term "instalment credit" is defined as relating to schemes in which repayment is made by regular predetermined instalments. Types of schemes covered include hire-purchase, time payment, budget account, and certain personal loan schemes. In the case of large personal loan schemes which include financing retail sales of motor vehicles, arrangements have been made with companies concerned to provide (on a partly estimated basis where necessary) particulars of their personal loan transactions dissected between those relating to retail sales of goods and other transactions ; the particulars relating to retail sales of goods are included in these tables. Other personal loan schemes are included only if the schemes relate primarily to financing retail sales of goods.

These statistics do not cover lay-bys, credit accounts not involving repayment by regular predetermined instalments, financing of sales of land and buildings, property improvements, services such as repair work or travel facilities, or rental or leasing schemes.

In these statistics the term "retail sales" relates not only to retail sales of goods by retail establishments coming within the scope of periodic Censuses and Surveys of Retail Establishments conducted by this Bureau, but includes also other sales of goods (such as plant and machinery) to final purchasers.

Northern Territory figures are included in this table.

All amounts are shown in £ million correct to one decimal place. Discrepancies due to rounding may therefore exist between totals and the sums of components.

No. 13—Direct Oversea Imports, South Australia, 1962-63

(For alphabetical Index to Items *see* page 20)

Note ; With some exceptions items which are nil or less than £10,000 are not shown separately. In some cases they are grouped to show as a section of a class or as a remainder of a section of a class and in other cases they are included in "other items" at the end of the class.

Value of Imports.—The value of goods imported from countries beyond Australia is recorded in Australian currency and represents the amount on which duty is payable or would be payable if duty were **ad valorem**. Section 154 (1) of the Customs Act, 1901-1954, provides that "when any duty is imposed according to value, the value for duty shall be the sum of the following" :—

(a) (I.) The actual money price paid or to be paid for the goods by the Australian importer plus any special deduction ; or
(II.) The current domestic value of the goods, whichever is the higher ;

(b) All charges payable or ordinarily payable for placing the goods free on board at the port of export.

"Current domestic value" is defined as "the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of these goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country."

Quantities.—Generally, but not invariably quantities have been shown in the ordinary trade unit ; where the cental is used, the unit equals 100 pounds avoirdupois. Where imports have been declared in packages without an indication being given of the number, capacity or weight, of the articles imported, the values only have been inserted.

N.E.I. ("not elsewhere included") and **N.E.S.** ("not elsewhere specified") refer to articles not covered in other items listed separately in the full Statistical Classification. However, some of the items listed separately in the full Statistical Classification do not appear on this table (see note above).

Import Duties.—Duties charged on imports into South Australia are collected by the Commonwealth of Australia under various Acts.

Restrictions.—Details for some items are not available for publication.

No. 14—Direct Oversea Exports, South Australia, 1962-63

(For Alphabetical Index to Items *see* page 20)

Note : With some exceptions items which are nil or less than £10,000 are not shown separately. In some cases they are grouped to show as a section of a class or as a remainder of a section of a class and in other cases they are included in "other items" at the end of a class.

Value of Exports.—The value of goods exported (including cost of containers) is recorded in Australian currency and the f.o.b. values have been determined as from 1st July 1937 as follows—

(1) Goods sold to overseas buyers before export—the f.o.b. equivalent of the price at which the goods were sold (e.g., as regards wool, the actual price paid by the overseas buyer plus the cost of all services incurred by him in placing the wool on board ship).

(2) Goods shipped on consignment—the Australian f.o.b. equivalent of the current price offering for similar goods of Australian origin in the principal markets of the country to which the goods were dispatched for sale (as regards wool, the f.o.b. equivalent of current price ruling in Australia will normally provide a sufficient approximation to the f.o.b. equivalent of the price ultimately received).

N.E.I. (not elsewhere included) and **N.E.S.** (not elsewhere specified) refer to articles not covered in other items listed separately in the full Statistical Classification. However, some of the items listed separately in the full Statistical Classification do not appear in this table (see note above).

Exports to other States.—Goods transferred from South Australia to the other States of the Commonwealth for shipment to oversea countries are shown as exports from the State from which the goods were finally dispatched and are not included in the South Australian details.

Ship's Stores.—Goods shipped as "ship's stores" on board oversea ships are not included in exports. *See* Table No. 10.

Restrictions.—Details for some items are not available for publication.

(a) Prior to 1905-06 rainfall was calculated by averaging falls recorded at 50 selected stations, and this method would give a higher result than the present method. Refer to the note on page 68 for description of the new procedure for calculating rainfall since 1905-06.

(b) Direct overseas exports of cereals and cereal products, the principal items being wheat, barley, oats, and flour, with smaller quantities of peas, split peas, bran, and pollard.

(c) Average value per bushel of all wheat to 1960-61, price per bushel of bulk wheat from 1961-62. *See also* Tables 61 to 66 *re* prices and values.

(d) First-mentioned figure relates to semi-hard varieties, and the second to soft varieties.

Note: Goyder's Line, which corresponds fairly closely with the 10in. rainfall line, is shown on the map at the front of this Part. The area north of the line (originally described by Surveyor-General Goyder in 1865 as land suffering from drought at that time) is now taken as being roughly that portion of the State which is suitable only for grazing.

NOTE :—Holdings for which total gross receipts for the year for all products were estimated at less than £600 (after deducting marketing costs) were classified as "sub-commercial" ; holdings not used or used for intermittent grazing during the season and holdings attached to prisons, hospitals, etc., were classified as "unused, special, etc." The remaining holdings were classified as "commercial" and the criteria used in classifying these to "type of activity" were briefly as follows :—

(*a*) Holdings running sheep and growing cereals for grain were classified as "sheep-cereal grain" if the combined receipts from these activities accounted for 75 per cent or more of the total receipts of the holding and provided receipts from sheep were no more than four times and not less than one quarter of receipts from cereals from grain.

(*b*) Holdings running dairy cattle and pigs were classified as "dairying" if the combined receipts of these activities was more than half of total receipts of the holding.

(*c*) Other holdings were classified to the activity (if any) which accounted for more than half of total receipts of the holdings.

(*d*) If none of the criteria under (*a*), (*b*), or (*c*) were satisfied, the holding was classified as "multi-purpose".

No. 61—Values of Primary Production, South Australia

Definitions :—

Gross Value is the value placed on recorded production at wholesale prices realized in principal markets. Where primary products are absorbed at a local point or become raw material for a secondary industry the value in each case is presumed to be the value at the principal market. Values include bounties.

Local Value is *gross value* less marketing costs, being value at place of production.

Net Value is *local value* less the value of materials used in process of production.

No deductions have been made for depreciation or certain maintenance charges.

AVERAGE RAINFALL OVER AGRICULTURAL AREAS

Average rainfall for each division is calculated by weighting the averages of readings at selected stations within counties by the area under crop in those counties. Counties in which little or no crop is grown are excluded from the calculations. The State figure is obtained by similarly weighting the divisional averages. (*See* the 1961-62 or earlier editions for the method of calculation previously used).

In a number of counties the area under crop is now negligible, and these counties (listed below) are excluded from recent calculations of rainfall. However, a few of these counties (marked *) were included in calculations for the years 1905 to 1946, although subsequently excluded. It should be noted that County Hamley has been omitted, because crops in this area are almost entirely dependent on irrigation rather than on rainfall.

Excluded counties are :—

Lower North—Kimberley*.
Upper North—Blachford, Derby, Granville*, Hanson*, Herbert, Lytton, Newcastle*, Taunton.
Western—Bosanquet, Hopetoun, Hore-Ruthven, Manchester, York.
Murray Mallee—Hamley, Young.

PERIOD COVERED

The period covered by the statistics in this Part is, in the main, the twelve months ended 30th June. In cases where some other accounting period is used it is permissible to complete the census schedule for that accounting period. These cases, however, are comparatively few, and their inclusion in no way impairs the comparability of the statistics in the year under review or from year to year. The Bureau also collects monthly statistics of certain articles produced and materials used. Because of the variation in annual accounting periods aggregates of these figures for the twelve months July to June may not agree with annual totals shown herein.

DEFINITIONS

Factory.—For the purposes of the accompanying statistics a factory is defined as an establishment in which four or more persons are employed or where power-driven machinery is used in manufacturing, repairing, or assembling. *It should be noted that the details relating to small establishments not classified for statistical purposes as factories are not included in the figures shown herein.*

Average Number of Persons Employed.—All persons employed in the manufacturing activities of a factory are counted as factory employees. The figures relating to employment, therefore, exclude all those engaged in selling and distribution, such as salesmen, travellers, collectors, carters engaged solely on outward delivery of manufactured goods, and retailing storemen. The figures, however, include proprietors who work in their own businesses and "out-workers".

The average number of persons employed is quoted on two different bases ; the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year); this average is used only in respect of details relating to classification according to number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

Working Proprietors are included in all employment figures other than those relating to age dissections, but in all cases drawings by working proprietors are excluded from *salaries and wages paid.*

Value of Premises and Machinery.—The values shown include an allowance for rent capitalized where premises and machinery are not owned by the occupiers.

Value of Materials Used.—This item includes the value, in the usual sense, of the materials used, stores used, containers, tools replaced, and materials used in repairs to plant. In general, it does not include the value of customers' articles or materials repaired, assembled, or treated by the factory.

Value of Fuel Etc. Used.—This item includes also the cost of power, light, lubricants, and water used.

Value of Output.—The value of factory output is the value of the goods manufactured or their value after passing through the particular process of manufacture and includes the amount received for repair work, work done on commission, and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory exclusive of all delivery costs and charges and excise duties but inclusive of bounty and subsidy payments to the manufacturer of the finished article.

Value of Production.—The value of production is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of materials, containers, packing, power, fuel, and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges).

In the process of manufacture many goods are treated in several industries, the output of one becoming the raw materials of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, and timber from the sawmills used in furniture factories and in joinery. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

There are many miscellaneous expenses, such as maintenance of buildings, depreciation, workers compensation insurance, other insurances, pay-roll tax, income tax, advertising, interest on borrowed money, bad debts, and many other sundry charges, which are not taken into account. Consequently it must not be inferred that when wages and salaries are deducted from value of production the whole of the surplus is available for interest and profits.

Rated Horse-power of Engines Used.—Statistics of power used in factories other than central electric stations relate to the "rated horse-power" of engines ordinarily in use and of engines in reserve or idle, omitting obsolete engines. In the case of central electric stations the figures refer to the "rated capacity" of engines and generators installed.

Note: From 1940-41 particulars for electricity and gas undertakings refer to generation only. Details of distribution and transmission (in 1940-41 covering approximately 1,500 persons, £400,000 in salaries and wages, and £700,000 value of production), which were previously included, are now excluded.

No. 16—Factories: Principal Materials Used, 1958-59 to 1962-63

Particulars shown in this table are arranged alphabetically. They represent recorded usage in the industries or processes indicated only, and therefore do not necessarily show total factory usage of the articles listed. It should be noted that materials used in small establishments not classified for statistical purposes as factories are not included in the figures shown herein. Where there are less than three users of a particular article in a State, details are confidential and indication of such is given by a footnote—(*a*) Not available for publication. Figures shown include, wherever applicable, quantities of articles produced and consumed in the same year in the factories producing them.

No. 17—Factories: Principal Articles Produced, 1958-59 to 1962-63

Particulars shown in this table represent total recorded factory production in South Australia of the listed articles and are presented alphabetically. It should be noted that the production of small establishments not classified for statistical purposes as factories is not included in the figures shown herein. Values shown represent the selling value at the factory excluding delivery costs and charges and Excise Duty where applicable. There are three standard notes throughout the table, viz. :—

(*a*) "Not available for publication" (figures confidential) ;

(*b*) "Quantity only available" (values not available owing to the inclusion, in the quantity produced, of—

(i) articles assembled—no values recorded ;

(ii) articles produced on commission—no values recorded ; or

(iii) Quantities produced and used in the same year in further processes in the works producing them).

In the case of (iii), this is indicated either by a separate figure or, where a separate figure cannot be given, by the third standard note, i.e. :—

(*c*) "Includes quantities produced and used in works producing them".

(*b*) Mean tide rises are shown as higher high water and lower high water, rather than as high water springs and neaps. This is the method of measuring tides which are predominantly diurnal rather than semi-diurnal in nature.

(*c*) No approach channel.

(*d*) Deep water gradually shoaling to depth at wharf.

(*a*) Gross values of estates prior to 1912.

(*b*) Incomplete coverage prior to 1920.

(*c*) From 1931 figures relate to the year ended 30th June of the next year, except that revenue and expenditure shown for 1931 is for the 18 months ended 30th June 1932.

(*d*) Not collected.

(*e*) The balance dates of all societies are not the same. From this year figures are aggregates of returns for financial years which ended during the twelve months ended 30th June of the next year. Although different cut off dates were used in previous years, there has been little effect, if any, on comparability of figures.
